

## TRU Cubicles

**Providing a flexible approach to bathroom adaptations in any room.**

# TRU Cubicles

The only true temporary re-usable shower cubicle - no need for silicone.

## Easy to survey

When considering the Tru Cubicle it is important to ensure that there is enough operating space for the person (and carer if needed) to effectively use the unit. Shower doors can open both in and out to ensure maximum access and a ramp can be provided for some trays.

The unit requires a water supply, access to a waste outlet and a suitable power supply. All services can generally be accessed by tapping into existing services within the property.

## Easy to install

The unit has been designed for rapid assembly on site. Where there is the availability of suitable power and water supplies the unit can be functional within a matter of hours. Typical installation takes 2 days where services are required to be installed.

## Specially Adapted Roof

Due to the strength and specific design features of the Autumn TRU Cubicle it is possible to manufacture the unit to allow a track hoist to pass over the unit. This can make the unit accessible to those who can only be mobilised by overhead hoist. (consult your healthcare professional for advice).

Note: the opening illustrated is 200mm wide but can be specified as required.

## Specification

	Tru Standard Cubicle	Tru Toilet Cubicle
Shower Tray * Standard option 1200mm x 1000mm*	✓	✓
